

Get your bills under control with the Home Heat Helpline

Why call now?

If you are worried about your heating bills you are not alone. But it is never too late or too early to prepare for the cold weather. By calling the Home Heat Helpline now you can access advice and grants to insulate your home for free in time for the winter to come.

What am I entitled to?

If you're receiving benefits such as the disability living allowance, pension credit, council tax benefit, child tax benefit or income-based jobseeker's allowance, you may be eligible for additional grants to insulate your house and improve your home's energy efficiency. In addition, energy suppliers have money put aside to help those in financial difficulties pay their bills. If you are disabled, over 60, have a young family, or are bringing up children on your own, there are special grants and services available to make sure you don't suffer over the winter. You can also take advantage of tips to improve energy efficiency and reduce your bills. It makes sense to find out about and benefit from services that you are entitled to.

What can I do?

The first step is to call the Home Heat Helpline for free on 0800 33 66 99. It is staffed by experts who can give advice on grants and how to save money on your heating bills by making your home more energy efficient.

What is the Helpline?

The Home Heat Helpline is a free, central phone number offering practical advice for people concerned about paying their energy bills. The Helpline is staffed by specially trained advisors. It is **open from 9am to 8pm Monday to Friday and 10am to 2pm on Saturdays**. You can access the Helpline by calling 0800 33 66 99 or on **minicom 0800 027 2122** and the Helpline has access to an interpreting service.

Hints & Tips

Simple steps to reduce your bills

- Turn radiators down in rooms which you only use occasionally
- Switch your lights off when you're not using them
- Turn appliances like TVs and phone chargers off at the wall rather than leaving them on standby when they're not being used
- Replace normal light bulbs with energy efficient bulbs which use 1/5 of the electricity. They may cost a little more, but they soon pay for themselves
- Regularly defrost your freezer to make sure it's operating at full efficiency

Thinking about insulating your home?

- Good insulation can make a real impact on your bills in the long run. Laying your loft with 10 inches of insulation can save you around 25% of your home's energy use. An adequate amount of insulation (250mm) can also save you around a quarter of heating costs and up to £200 every year
- Around 33% of the heat lost in your home is through the walls, so insulating them can be the most cost-effective way to save energy in the home. Installing cavity wall insulation can save you up to £160 per year on your heating bills

Staying warm

- Draw curtains over windows at night to provide insulation for the room
- Keep outside doors shut and block up obvious draughts (including the letterbox)
- Move furniture away from radiators and heaters to allow heat to circulate around the room
- Open internal doors of any rooms which get more sun than others and let the warm air travel around your home.
